Triton Digital Releases July Internet Audio Top 20 Rankers

Boston, MA – September 8, 2011 – Triton Digital has released its monthly Internet audio Top 20 Ranker for July. The Ranker is a listing of the top-performing Internet audio stations and networks measured by the Webcast Metrics® audience measurement platform.

Webcast Metrics uses a proprietary platform to track audience data and convert it to audience metrics that can be easily understood by stations, publishers and advertisers. Audience rankings are done on the basis of "Average Active Sessions", with "Session Starts" and "Average Time Spent Listening" also displayed. Average Active Sessions (AAS) is defined as "Total Listening Hours (TLH) divided by hours in the reported time period." TLH is defined as the total number of hours that the station/publisher has streamed during sessions with duration of at least one minute in total within the reported time period. Session Starts (SS) is defined as "the number of different requests for streams (i.e., stream requests) with a duration of at least one minute in total within the reported time period." Average Time Spent Listening (ATSL) is defined as "the average number of hours for each session with a duration of at least one minute in total within the reported time period. Calculated as total time spent listening divided by active sessions." Rankers are divided into "Domestic" and "All Streams." The "Domestic" Ranker quantifies listening done inside the U.S. based on log-based information provided by the station. The "All Streams" Ranker merely verifies the quantity of streams without qualifying where they are being consumed.

For more information on measurement collection and limitations, please view the Triton Description of Methodology available at

Average Active Sessions (AAS): Total Listening Hours (TLH) divided by hours in the reported time period. TLH is defined as the total number of hours that the station/publisher has streamed during sessions with a duration of at least one minute in total within the reported time period.

Session Starts (SS): The number of different requests for streams (i.e., stream requests) with a duration of at least one minute in total within the reported time period.

Average Time Spent Listening (ATSL): The average number of hours for each session with a duration of at least one minute in total within the reported time period. Calculated as total time spent listening divided by active sessions.

Note: Ranker data only includes clients that participate for the full month for which the ranker is being released.

~Excludes the following groups: radioio.com, LLC, Boomer Radio, audiocandy mediagroup LLC, WOR Radio, 3WK LLC, SmoothJazz.com Corp., and Choice Radio Corporate.

+ During this period, the code that measures audience and time spent listening was inadvertently omitted by Pandora in some versions of their mobile applications. Therefore, not all of Pandora's mobile listening is captured in this report. This omission will affect June and July ranker data for Pandora.

—ESPN states that data collection for the month of July was impacted due to a change in service provider.
